

Marketing Funnel & Conversion Analysis Report

Project Overview

This project analyzes customer conversion data from the **Bank Marketing Dataset** to identify the factors influencing successful marketing campaigns. The analysis focuses on customer demographics, communication methods, campaign timing, and conversion behavior. The objective was to generate actionable business insights to improve marketing effectiveness and support data-driven decision-making.

Tools Used

- Python (Pandas, Matplotlib)
- Tableau Public
- Microsoft Excel
- GitHub

Dataset

Dataset: Bank Marketing Dataset (UCI Machine Learning Repository)

Marketing Campaign Performance

KPI	Value
Total Customers	45,211
Converted Customers	5,289
Conversion Rate	11.70%
Average Customer Age	41.67 Years

Key Findings

1. Customer Occupation Analysis

Students recorded the highest conversion rate, followed by retired customers. Blue-collar customers showed the lowest conversion rate, indicating that campaign effectiveness varies across occupations.

2. Contact Method Analysis

Cellular communication achieved the highest conversion rate, making it the most effective method for customer outreach. Telephone campaigns performed moderately, while unknown contact methods produced the lowest conversion rates.

3. Education Analysis

Customers with tertiary education demonstrated the highest conversion rates. Secondary education ranked second, while primary education showed comparatively lower conversion success.

4. Campaign Month Analysis

March recorded the highest conversion rate among all campaign months. September, October, and December also showed strong performance. Although May had a large number of customer contacts, its conversion rate was comparatively lower, indicating reduced campaign efficiency.

5. Age Group Analysis

Customers aged **60 years and above** achieved the highest conversion rate, followed by customers aged **18–30 years**. Middle-aged customer groups displayed relatively similar conversion rates.

Business Recommendations

- Focus future marketing campaigns on high-converting customer segments such as students and retired customers.
- Increase the use of cellular communication to improve customer engagement and campaign success.
- Schedule major marketing campaigns during high-performing months such as March, September, October, and December.
- Develop personalized marketing strategies based on customer demographics, including education level and age group.
- Review campaign strategies implemented during lower-performing months to improve overall conversion performance.
